smartPRODUCTIONKIT (sPK)

With our IoT solution, you can use the full potential of your data by analyzing it in real time and retrospectively

Let the data work for you!

Our smartPRODUCTIONKIT is the central software platform for monitoring and analyzing production data in real-time, as well as providing the database to enable our AI-based innovations. Improve productivity by collecting, monitoring, analyzing and visualizing your data assets to identify strengths, uncover optimization opportunities and leverage insights for your success.

Benefits

Machine Utilization

- Display yield, technical availability, downtime, quantity of produced parts

Accessibility

- Web-based application, optimized for desktops, large monitors or mobile devices

Profitability

- Gain insights to enhance efficiency and profitability through increased throughput

Manufacturing Quality

- Key performance indicators (KPIs) help you to identify bottlenecks and weak points

Process Optimization

- Improved stability of your manufacturing processes lead to less scrap and defective parts

Root Cause Analysis

- Faster, better and easier failure analysis for bottleneck and performance incidents
